

Bottom to Top Brain Integration
(Fight or Flight--Emotional Grounding-Organization)

Top of the Brain

THE RATIONAL BRAIN

The Cerebral Cortex

(Thinks logically, voluntarily controls muscles and contains the centers for vision and the sensory perception.)

is wired to

The Emotional Brain

The Limbic System

Center of the five major drives of man-fear, anger, love, sex, feeding and the physical consequences of each
(Controls Emotional Response)

is wired to

THE SUBCONSCIOUS BRAIN

The Cerebellum

The language of the subconscious is image and emotion.
(Subconsciously Coordinates Muscle Movements)

is wired to

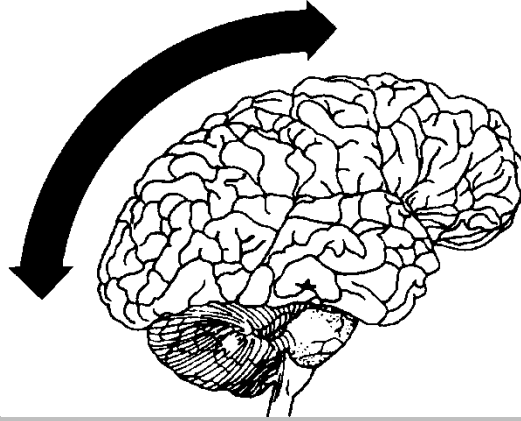

THE INSTINCTUAL BRAIN

The Brain Stem

(Hardwired for instinctual and automatic response)

Bottom of the Brain

Back to Front Brain Integration
(Fight or Flight---Taking Risks---Higher Level Thinking---Participation---
Self Expression)

Front of the Brain

Synthesis & Expression of Information
Cerebral Cortex/Frontal Lobes
Takes all the information from the rest of the brain and synthesizes it into
thought and action related to reasoning.
(Involved with logical thinking)

is wired to

Retrieving Information
Cerebral Cortex/Parietal Lobes
(Involved with voluntary muscle control and sensations)

is wired to

Receiving & Storing Information
Cerebral Cortex/Occipital Lobes
(The visual integration centers of the brain)

Back of the Brain
